

MANYAM JAGADEESWAR REDDY

Location: Dharwad, Karnataka. | Phone: 9110385587 | Email: manyamjagadeeswar7989@gmail.com
LinkedIn | GitHub | LeetCode

EDUCATION

Indian Institute of Information Technology Dharwad
B.Tech - Data Science and Artificial Intelligence

Expected Graduation: 2027
GPA: 8.21

EXPERIENCE

Freelance Full-Stack Developer

Jan 2026 – Present

FutureStocks – Real-Time Market Intelligence Platform

[Live Link](#)

- Architected a split-process system separating Next.js (serverless HTTP) and a standalone Socket.IO server on AWS EC2 with JWT-verified handshake authentication and role-based access control.
- Built a cron-driven ingestion pipeline for NIFTY 500 stocks via Upstox API, batching 20 symbols per request with controlled rate limiting and MongoDB bulk upserts.
- Designed a dual-write MongoDB strategy using TTL-indexed intraday snapshots and a persistent closing-window fallback (3:10–3:45 PM IST) for post-market data availability.
- Engineered production-grade SEO with dynamic `generateMetadata()` for 500+ stock pages, DB-driven `sitemap.xml`, programmatic `robots.txt`, canonical URLs, and ISR (3600s).
- Developed a 3-step admin MFA system (password + SMS OTP + email OTP) with bcrypt-hashed OTP storage and database-backed rate limiting.

PROJECTS

NetViz Pro - Reliable Transport Simulator - [GitHub Link](#)

Dec 2025

Tech Stack: Java, Node.js, React.js, UDP, WebSockets

- Developed a custom **Reliable UDP protocol** using Hybrid Sliding Window ARQ to ensure 100% data integrity for binary file transfers via checksum validation and packet sequencing.
- Architected a distributed system integrating a Java ARQ engine with a React dashboard through a Node.js UDP–WebSocket bridge for real-time packet transmission and ACK visualization.
- Implemented retransmission timers, cumulative ACKs, and configurable packet loss simulation (0–100%) to maintain reliable delivery with live throughput monitoring.

devOrbit - AI Bug Intelligence Platform - [Live Link](#)

Apr 2025 – Oct 2025

Tech Stack: Next.js, TypeScript, MongoDB, TailwindCSS, OAuth 2.0, JWT

- Designed, built, and deployed a **production-ready full-stack bug tracking platform** using Next.js, TypeScript, and MongoDB, supporting multi-user collaboration with **role-based access control**.
- Implemented stateless authentication using **JWT access and refresh tokens** with secure HTTP-only cookies and integrated **OAuth 2.0** (Google, GitHub) for social login.
- Developed modular **REST APIs** and integrated AI-powered bug severity classification using the Xenova/Transformers library for intelligent categorization.

TECHNICAL SKILLS

Programming Languages: Java, JavaScript, TypeScript, Python, SQL

Frameworks & Libraries: Next.js, React.js, Node.js, Express.js, TailwindCSS, HTML, CSS

Databases & Tools: MongoDB, PostgreSQL, Git, GitHub, AWS EC2, Docker, Vercel, Postman, VS Code, IntelliJ IDEA

Technologies: WebSockets (Socket.io), REST APIs, JWT, OAuth 2.0, UDP

Core Fundamentals: Data Structures and Algorithms (DSA), Object-Oriented Programming (OOP), Database Management Systems (DBMS), Operating Systems (OS), Computer Networks

ACHIEVEMENTS

- **Competitive Programming:** Solved **450+ LeetCode problems** with a peak contest rating of **1519**, demonstrating strong problem-solving and algorithmic reasoning across 20+ LeetCode and 17 CodeChef contests.
- **Awards:** Earned the **200 Days Badge 2025** on LeetCode for consistent daily problem-solving.
